AddressCube Crack is a portable address manager that allows users to quickly add addresses to an address book. All fields can be searched for using the fields selection dialog. The search results can be filtered using the filter dialog. Due to the focus on simplicity AddressCube is built to be as user friendly as possible. Only a few functions are supported, and only those functions that are necessary to add, sort, and search for addresses. All functionality is completely independent of each other and the user can chose which functionality to use in which order, also users can use any address (text) file format and not limited to AddressCube's built in format. When no database file is found, a new database file is created and saved. AddressCube's database file consists of only 2 user specific defined fields. The first field is the name of the user. The second field is used to store the current address used by the user. When adding or searching for new addresses this field is empty. During address book selection, AddressCube uses this field to store the selected address. To keep the database file small and easy to be transferred, any custom text properties can be added that normally would not be stored in an address file.
