1. Technical Field The present disclosure relates to a control circuit for controlling a semiconductor device. 2. Description of Related Art A semiconductor device includes a number of integrated circuits and corresponding packages. The integrated circuits and packages are electrically connected to each other via a circuit board. The circuit board usually includes a number of conductive pads. Electrode terminals of the integrated circuits are soldered to the conductive pads for establishing electrical connections with the circuit board. The circuit board usually includes a number of holes for receiving soldering rods of the integrated circuits. The soldering rods connect the electrode terminals of the integrated circuits to the conductive pads. However, the electrode terminals of the integrated circuits may be a soft soldering material. Solder joints may be produced in the electrode terminals of the integrated circuits during soldering the integrated circuits to the circuit board. When the integrated circuits start to operate, the soldering material in the electrode terminals may flow in the holes of the circuit board to contaminate the integrated circuits. Therefore, the soldering material may affect the integrated circuits. What is needed, therefore, is a control circuit and a control method for a semiconductor device which can overcome the above-described shortcomings. Q: How to draw a diagonal line on a canvas in Android? I'm having some trouble implementing a diagonal line on the screen in Android. I've tried using a diagonal line directly on the screen (via canvas.drawLine), as well as with a RectF object (via canvas.drawRoundRect). However, with either implementation, the first point of the line is drawn incorrectly, and the end-points are not drawn at all. Furthermore, as the line grows longer, the end points move away from the actual (y=0) line instead of approaching it. I've tested the same code on an android emulator running 2.2, and on a personal Nexus 7 running 2.3.3. The result is the same, so I'm fairly sure that this issue is limited to my emulator. It is also slow and sluggish on my Nexus 7. The code for my first attempt is as follows: Line line = new Line(500, 50, null, Color.rgb(66, 90, 94), Color.rgb(66, 90, 94)); canvas.drawLine(line.getX1(), line.getY1(), line.
