Previewing file metadata can be a troublesome task, especially when dealing with a large number of files of various formats. Fortunately, there are solutions to such issues and one of them is MetadataFox. This application was created to offer users with an efficient way of previewing metadata for multiple files simultaneously. Clean interface that offers an excellent overview of the metadata for multiple files The application comes packed with a minimalist interface that offers a two section layout for easy metadata reading. One will be able to browse the folder directory structure to access the files for which metadata is to be previewed. After selecting a preferred metadata type from the predefined list and a file directory, people will be able to view details about all the files from the respective directory. The main viewing area offers details such as name, title, creator, description, publisher, etc., all resizable and arrangeable. Metadata preview becomes a breeze with this intuitive and straightforward application People will be able to view metadata for multiple files simultaneously, this way avoiding manually accessing the properties for each one. Since it offers metadata preview for multiple files, it means that it enables users to easily create lists with the preferred records. To this end, MetadataFox allows users to export records for further processing in external applications. Unfortunately, the only supported format is CSV and this might be perceived as restrictive by many users. Nevertheless, the fact that it does offer metadata record export is of great use. MetadataFox Details: Import Preview Feature for ALL of your files (Files and Folders) Organize files into categories by the type of metadata field (Text, Numbers, Sprites, Audio, etc) that you wish to include in your Project. Create different tabs for different metadata fields (Text, Numbers, Sprites, Audio, etc) that you wish to include in your Project. Automatically add metadata fields and import metadata directly from text files with very few steps. Add metadata fields to your project by simply dragging and dropping from your folders or text files into the corresponding fields in the Project. Remove unwanted metadata fields by simply dragging and dropping them into the Trash. Preview metadata while files are being added to your project. Preview metadata while files are being removed from your project. Select a field with your metadata data and move it to a new location. Add multiple metadata fields to the same field easily. Drag and drop multiple files to the same field with their metadata intact. Select multiple files and change their metadata at
