In one embodiment, the secondary monomer material is a combination of a vinyl monomer and a primary amine. It is known that vinyl monomers can be polymerized with primary amines, such as methylamine, to produce a polymer that can be used in the manufacture of toner. The resulting polymers can be cross-linked by the addition of a polyfunctional compound, such as a polyamine or a polyglycidyl ether. U.S. Pat. No. 4,116,936 to Wallace et al. discloses toner resins produced from the use of a polymerization reaction of primary amines and vinyl monomers. A toner resin is made by the polymerization of a primary amine or amines with vinyl monomers, such as styrene, toluene, etc., in the presence of a catalyst, such as dibutyl tin dilaurate. It is known to formulate toner resins by suspension polymerization. Suspension polymerization,

"People need to hear from the people who know firsthand the negative effects this legislation will have on the lives of the people we serve," said Sen. Jud Brown (D) in a statement Wednesday. "As an active board member of the Hispanic Chamber of Commerce, I am thrilled to see the student-led die-in to bring attention to these bills and the potential negative impact they could have on the Hispanic community. ♦ 3e33713323
